# Global MX-5 Cup Car Technical Service Bulletin #6-02-16

## Coolant overflow hose replacement and routing

### Purpose for this TSB:

1. Replace the stock coolant overflow tank hose

### Installation:

1. Follow all safety standards and wear the appropriate safety gear
2. Ensure that the kill switch is OFF, and the car has cooled down completely
3. Locate, remove and discard the stock overflow hose and remove it

4. Install the new hose onto the overflow cap and then route the hose through the top and bottom holes on the front engine cross member. The picture below on the left shows the completed correct installation. The picture below right is just to show (sans engine, etc...) the new hose going completely through the cross member
